

STERIELIZER™

LYOPHILIZER DECON SYSTEM

The DSE STERIELIZER is an advanced and energy efficient hydrogen peroxide vapor decontamination system for the decontamination of any small lyophilizer (freeze dryer) to a six log level. The kit includes all parts required and consumables for a complete system that can be documented and validated.

Fully Integrated System: Allows precise control of test conditions (hydrogen peroxide concentration, water vapor concentration) and exposure times.

Fully Automated: A color touch screen or PC controls sensors that monitor and record the process conditions and maintain the appropriate concentration of hydrogen peroxide vapor, water vapor, and temperature.

Easy to Use: The graphical data display makes it effortless for the user to confirm that process conditions are in range during testing.
